We are pleased to welcome you to the "World Congress on Pulmonology and Respiratory Medicine" after the successful completion of the series of [Respiratory Congress](#). The congress is scheduled to take place in the beautiful city of Paris, France on November 16-17, 2020. This Respiratory 2020 conference will provide you with an exemplary research experience and huge ideas.

The perspective of the [Respiratory](#) Conference is to set up for new research to help people understand how treatment techniques have advanced and how the field has developed in recent years.

While primary care doctors can handle mild or short-term conditions, such as those caused by a cold or [respiratory infection](#), you'll need to see a pulmonologist to diagnose, treat and manage more complex illnesses that primarily affect the lungs. Once you have a diagnosis, a pulmonologist will create a treatment plan.

[Respiratory medicine](#) deals with the causes, diagnosis, prevention and treatment of diseases affecting the lungs. Pulmonary medicine is also sometimes called [pulmonology](#) which is the science concerned with the anatomy, physiology, and pathology of the lungs.

Diseases commonly evaluated and treated by pulmonologists include asthma, [chronic obstructive lung disease \(COPD\)](#), emphysema, lung cancer, interstitial and occupational lung diseases, complex lung and pleural infections including tuberculosis, pulmonary hypertension, and cystic fibrosis.

Major surgical procedures on the heart and lungs are performed by a thoracic surgeon. [Pulmonologists](#) often perform specialized procedures to get samples from the inside of the chest or inside of the lung. They use radiographic techniques to view vasculature of the lungs and heart to assist with diagnosis.

Diagnostic procedures or treatments that are done with bronchoscopy include: Fluid put into the lungs and then removed (bronchoalveolar lavage or BAL) to diagnose lung disorders. Removal of secretions, blood, mucus plugs, growths (polyps) to clear airways. Control of bleeding in the bronchi.
