### Market Analysis:

The Global Stroke Management Market size is expected to reach \$40.6 billion by 2024, rising at a market growth of 7.3% CAGR during the forecast period

Stroke is a medical emergency that occurs when the flow of the blood is restricted to the brain and as a result, brain cells start dying. Chronic diseases have been a major factor that is responsible for the growth of the stroke management market. Additionally, the growing generation, which is highly susceptible to strokes, growing diabetic population, and usage of tobacco are other factors that are driving the growth of the market. However, the cost associated with the treatment and stringent government regulations pertaining to the approval of new and advanced devices and drugs would limit the market growth.
