Editorial

I am Cheerful to declare that Education Research (ER) is an international journal and that gave me chance to bring forward the achievements of the journal in the year 2019. The ISSN of ER is 2141-5161. The publisher of this journal is International Research Journal. Educational Research (ER) is currently included in IndexCopernicus database, Google Scholar, EBSCOhost™ databases. The entire issue was published by ER at the time and the preprints were also released and dispatched online within 30 days after the article was published online. The Journal is aimed at researchers and various agencies interested in reviewing studies and theoretical papers at any level of education. Educational Research publishes original empirical and theoretical studies and educational analyses that make a major contribution to understanding and/or improving educational processes and outcomes. The journal welcomes high-quality articles and reviews by academics based on subjects of educational interest. The journal publishes state-of-the-art articles, theoretical reports, meta-analytic research reviews, narrative reviews and synthesis of best-evidence, research critiques, forum articles, analytical reviews and thematic reviews.

Educational Research is scholarly open access, peer-reviewed journal focusing on theories, methods and applications in Education. The journal isn't limiting its coverage to any age group. Articles dealing with schooling are relevant across the developmental continuum. Educational Work (ER) publishes publications in our open

access journals (monthly) in all the subject areas. The Journal accepts manuscripts submitted that meet the general standards of relevance and scientific excellence. Papers are to be released about a month after acceptance. All papers published in Educational Research (ER) are subject to peer-review. The consistency and review level of our publications is assured by our committed technical and editorial team members from various fields of education science. Educational Research (ER) publishes original articles, reviews and letters to the editor. Because each report to be published online cumulatively covers 45 days from the date of receipt. The period for different processes including quality control, peer review, paper preparation is taken from 4 to 5 weeks. Quality reviews and peer review procedures are completed within 14 days, and the submission date is just 7 days after the reviewers and editors have approved the post. Articles published in the Journal of Educational Research show substantial improvement on previously published studies, or carry new thoughts or observations that could have a strong impact in this field. ER has received 3 research articles and 1 review article in issue 1 of volume 10. ER is going to announce International Conference in 2020. I would like to recognize the presence of the contribution made by all the writers, reviewers and other supporting communities during the final editing of the published articles and the assistance provided by the editorial assistant in timely resolution of ER issues. I am very grateful to them for helping me to recognize the work and growth of other peoples that make this journal a success.
